

URANIUM POWER CORP.

Management's Discussion and Analysis

For the Six Month Period Ended

March 31, 2007

INTRODUCTION

This discussion and analysis of financial position and results of operation is prepared as at May 25, 2007 and should be read in conjunction with the unaudited financial statements for the six-month period ended March 31, 2007. Those financial statements have been prepared in accordance with Canadian generally accepted accounting policies, consistent with the preparation of the annual, audited financial statements for the fiscal year ended September 30, 2006. All dollar figures included therein and in the following management discussion and analysis ("MD&A") are quoted in Canadian dollars unless otherwise indicated. Additional information related to the Company, including its press releases and quarterly and annual reports, is available for view on SEDAR at www.sedar.com.

Statements in this report that are not historical facts are forward-looking statements involving known and unknown risks and uncertainties, which could cause actual results to vary considerably from these statements. Readers are cautioned not to put undue reliance on forward-looking statements.

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

Certain statements contained in this MD&A constitute "forward-looking statements". Such forward-looking statements involve a number of known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date the statements were made, and readers are advised to consider such forward-looking statements in light of the risks set forth below and as detailed under **RISK AND UNCERTAINTIES** in this MD&A.

Risk factors that could affect the Company's future results include, but are not limited to, risks inherent in mineral exploration and development and mining activities in general, volatility and sensitivity to market prices for uranium, political risk arising from operating in USA, changes in government regulation and policies including environmental regulations and reclamation requirements, receipt of required permits and approvals from governmental authorities, competition from other companies, ability to attract and retain skilled employees and contractors, and changes in foreign currency exchange rates. Further information regarding these and other factors which may cause results to differ materially from those projected in forward-looking statements are included in the Company's filings with securities regulatory authorities. The Company does not undertake to update any forward-looking statement that may be made from time to time by the Company or on its behalf, except in accordance with applicable securities laws.

DESCRIPTION OF BUSINESS

Uranium Power Corp ("UPC" or the "Company") was incorporated under the Company Act of British Columbia and is primarily engaged in the acquisition and exploration of resource properties. To date, the Company has not earned significant revenues and is considered to be in the exploration stage. The Company is a reporting issuer in British Columbia and trades on the TSX Venture Exchange under the symbol "UPC".

As at March 31, 2007 and September 30, 2006, the Company's business activity was the identification, acquisition, evaluation, exploration and development of mineral properties, particularly those with the potential to host uranium deposits. The Company is in the process of acquiring, exploring and developing its mineral properties and has not yet determined whether the properties contain resources that are economically recoverable. The recoverability of the amounts shown for mineral properties and related deferred exploration costs are dependent upon the existence of economically recoverable reserves, the ability of the Company to obtain necessary financing to complete the development of those reserves and upon future profitable production.

The company's properties and related activities are described below:

WYOMING CLAIMS, USA

Sheep Mountain

Under a Purchase and Sales Agreement dated December 8, 2004, and amended August 22, 2005 and January 12, 2006, the Company has the right to earn a 50% interest in the Sheep Mountain project, as well as several other exploration properties from U.S. Energy Corp and Crested Corp (USECC).

The Sheep Mountain uranium mines located in south-central Wyoming were originally developed in the 1950's. They were acquired by USECC from Western Nuclear, Inc., a subsidiary of Phelps Dodge Corporation in 1987. According to a 1980 report by S.G. Douglas of Western Nuclear, fourteen categorized mining areas, including both underground and open pit operations have been operative in the past at Sheep Mountain. From pre-1969 through 1980, records show 5,063,813 tons of ore have been mined and milled, yielding 17,385,116 pounds of uranium at an average grade of 0.17% U₃O₈. In excess of \$25 million has been spent on Sheep Mountain exploration, development and production. The mining operations on Sheep Mountain were suspended in 1981 and have been on a standby maintenance basis since that time except for a short period of production in 1988 by USECC.

According to Western Nuclear, Inc. records, uranium occurs in a series of related geochemical cells, or roll fronts within the Battle Springs Formation. Uranium mineralization identified from drilling and mining occurs over approximately 800 feet of vertical elevation with uranium ore deposits having been mined and tested over approximately 650 feet of vertical range at Sheep Mountain. Sixteen mineral horizons varying between 25 and 45 feet thick and one 80-foot thick horizon were identified on cross sections in the lower member of the Eocene Battle Springs Formation at Sheep Mountain.

In October 2006, the Company received a National Instrument 43-101 Technical Report, completed by Scott Wilson Roscoe Postle Associates. This report has been filed on SEDAR. The report shows an Inferred Mineral Resource for Sheep Mountain totaling 4.56 million tons at an average grade of 0.171% U₃O₈, and with a uranium content of 15.6 million pounds. The classification of these resources is compliant with CIM Classifications as required by NI 43-101.

Additional historical resources have been identified on the property. These historical estimates total 6.5 million pounds U₃O₈, and are located in the North Gap area of the property. These historical resources were prepared before implementation of National Instrument 43-101. Recent independent verification of the data has not been performed and USECC/UPC have not completed sufficient exploration work to verify the historical estimate. The historical resources were prepared to industry standards at the time and are considered relevant today. USECC/UPC are not treating the historical estimates as NI 43-101 defined resources verified by a qualified person and they should not be relied upon.

The Sheep Mountain mine remains fully permitted, and can be brought back into production in a relatively short time frame.

Rio Tinto Energy America owns a modern uranium mill located approximately 20 miles from the Sheep Mountain deposits and, as part of the Company's feasibility studies, will be approached with respect to possibly processing Sheep Mountain ore. As a parallel study, the heap leaching possibilities will also be evaluated.

USECC has posted a \$1.4 million bond and has fully permitted the Sheep Mountain Mines. This will definitely assist and speed up the feasibility study process.

In addition to the Joint Venture on Sheep Mountain, USECC will provide the Company with access to its extensive uranium data libraries. These libraries contain information on additional known and potential uranium deposits. Exploration capital will be used to further delineate the Sheep Mountain deposits and to acquire, develop and produce additional uranium deposits. The Company will own 50% of any new deposits. USECC will, in addition, supply the Company with information of other uranium deposits of which it has knowledge.

The Sheep Mountain uranium project has a reclamation liability of approximately US\$4,000,000 with the Company and the Vendors responsible ½ each for the first US\$2,600,000 and the Vendor's responsible for the last US\$1,400,000. If the Company terminates this agreement prior to closing on December 29, 2007, the Company's reclamation liability will be extinguished. Since the agreement can be terminated by the Company prior to closing, the reclamation liability is considered a contingent liability and has not been recorded in the Company's financial statements.

URANIUM POWER CORP.**Six Month Period ended March 31, 2007****Management's Discussion and Analysis****FORM 51-102F1**

A finder's fee of \$150,000 and 300,000 common shares is payable, of which \$100,000 and 200,000 shares at a value of \$34,000 have been paid. The remaining balance will be paid on the second anniversary of the closing of the agreement and has been recorded as a finder's fee payable of \$50,000 and an obligation to issue shares at a value of \$17,000. The cash payment and share issue required to complete this agreement were paid on February 6, 2007.

The Company and the Vendors of the Sheep Mountain property have entered into an amended agreement whereby the Company has accelerated its 2006 payments and has paid US\$1,600,000 and issued 1,500,000 common shares to the Vendors. In exchange for the accelerated payments, the Vendors have agreed to defer for a period of one-year payments due in two instalments of US\$1,500,000 each originally due on April 29, 2006 and October 29, 2006. Of the \$4,600,000 due in 2007, \$500,000 has already been paid to the Vendors.

The vendors are currently undergoing due diligence procedures by Uranium One, a potential purchaser of USECC's uranium property interests, including its interest in the Sheep Mountain joint venture.

UTAH CLAIMS, USA**Green River South (formerly Sahara) Uranium Mine**

The Company has an agreement to option the Sahara Uranium Mine located in Emery County, Utah USA. The Sahara Mine is approximately 14 miles (23km) SW of Green River, Utah. The property consists of 456 unpatented lode-mining claims located on BLM land and five State of Utah mining leases. The mine was developed in the late 1970's, with a decline being driven approximately 2,600 ft (792m) and an additional 700 ft (213m) of lateral development being completed. Mining was halted almost immediately after it was started in 1980. Old mine records indicate that only one truckload of ore was shipped in the 80's. The records of the mine operator, Energy Fuels Nuclear, indicate a proven and probable resource of approximately 500,000 lbs U₃O₈ with an average grade of about 0.23% U₃O₈. Similar amounts of vanadium are predicted to exist.

The historic resource estimate reported above, was completed by Energy Fuels Nuclear before the implementation of National Instrument 43-101 and the Company believes that the work was carried out under standard industry practices in use at that time and that the estimate was considered reliable at that time. Although independent verification of the data has not been performed, the resources are considered relevant today. The Company has not completed sufficient work to verify the historical resources and they should not be relied upon. Although the classification of the resources does not meet the current definitions as required by NI 43-101, the Company believes that under the current definitions, the above historic resource estimates would be classified as inferred resources. There are no recent resource estimates other than reported above.

By 1980, only one truckload of ore had been shipped to the Energy Fuels mill facility near Blanding, Utah when the Three Mile Island Nuclear accident occurred. At that point, no further mining went forward. The facility was placed on standby and remained so until the early 1990's, when Energy Fuels Nuclear, then facing financial setbacks, withdrew from the project and reclaimed the property. All drill records, maps, reports, etc. were turned over to the current owners and remain in their possession to this day. Sahara Mine records indicate that development expenditures on the property by Energy Fuels Nuclear during the 1970's and 1980's exceeded \$10,000,000 in today's dollars. Under the terms of the agreement, Uranium Power would initially option 70% of the Sahara Mine and surrounding properties based on the following terms:

Upon signing by the Parties of a definitive agreement and after a due diligence process, the Company paid US\$150,000 cash and issued 100,000 shares of Uranium Power Corp. Uranium Power will commit to issue 200,000 shares and to spending a minimum of US\$1,365,000 in exploration and development of the Green River South in the first 4 years. An advance royalty payment of US\$585,000 will be due in equal installments for four years.

Upon completion of the work commitment, the joint venture will have earned a 70% interest in the Green River South (formerly Sahara) mine property. Subsequent to the initial earn-in the joint venture will have an option to acquire an additional 15% interest in the property for an additional \$300,000 cash, and an additional work commitment of \$700,000.

The Vendor and buyer paid equally a finder's fee payable to Jim Petit (up to a total for both parties of \$15,000.)

Pursuant to recent amendments in its joint venture agreement with USECC, the Company will retain a 50% interest in the joint venture (i.e. a 35% interest in the property), and will earn a 50% interest in the Green River North project (see below).

The partners recently completed a 14,405-foot drilling program (21 holes). Five of these holes were cored, and provided information to validate previous drilling, and samples for disequilibrium testing. The remaining 16 holes were intended as a first test of additional exploration targets on the property. The results of this drilling are shown below.

All five of the core holes had high core recovery (90-99%) and intersected uranium mineralization consistent with results from earlier drilling (1978-79) by Energy Fuels. The best intercept was 5ft at an average grade of 0.12% eU₃O₈ in drill hole GR-1002, at a depth of 438.0 – 443.0 feet.

Summary of Drill Intercepts:

Hole #	Total depth (ft)	From-To (ft)	Thickness (ft)	%eU ₃ O ₈	
GR-1001	522.0	458.5-461.0		2.5	0.13
GR-1002	510.0	430.5-434.5		4.0	0.10
		and 438.0-443.0		5.0	0.12
GR-1003	500.0	446.5-449.0		2.5	0.10
GR-1004	510.0	429.0-442.0		13.0	0.10
GR-1005	510.0	448.0-452.0		4.0	0.07
		and 467.5-472.5		5.0	0.04

GR-1006-1021, depths 480 – 840, 10 holes anomalous or weakly mineralized, 6 holes barren.

Core analysis was performed to determine disequilibrium. The results show that when the radiometric grades are below 0.05% eU₃O₈, the true uranium content is slightly overestimated; when the radiometric grade is above 0.05% eU₃O₈, the true uranium content is slightly underestimated. This is typical of this type of deposit.

The Sahara deposit is located directly adjacent to a paved highway, and is approximately 90 miles by paved highway to USECC's Shootaring Canyon mill.

Green River North

A 50% interest in the Green River North project has been acquired by the Company pursuant to an amended agreement with USECC, by which USECC's interest in this property now forms part of the Company's joint venture with USECC.

On the combined Green River North and South properties, the Company will earn a 50% interest in the property by spending US\$500,000 on exploration and development after which USECC will fund the next \$500,000. Subsequent expenditures will be shared equally.

A similar program to that planned for the Green River South project is planned, to upgrade the status of the Deeper Gold deposit. Five core holes will be drilled, and an NI 43-101 compliant resource study completed. All old drill data has been digitized, and deposit modeling is underway. The timing of the field portion of this program is under discussion with the project operator.

The Deeper Gold deposit is approximately 110 miles by paved road from USECC's Shootaring Canyon uranium mill.

Red Seep Project, Emery County, Utah

The Company has acquired a 100% interest in the Red Seep Uranium Project in Emery County, Utah. UPC has acquired 94 federal lode mining claims covering over 1900 acres or approximately three square miles on the prospect. The Red Seep project is situated on the northwestern flank of the San Rafael Swell, approximately 10 miles east of Ferron, Utah.

The Red Seep project is believed to have the potential to host a high tonnage, low-grade uranium deposit in the Brushy Basin member of the Jurassic Morrison Formation. A report published by the U.S. Department of Energy in October 1977 (USDE report) states that "uranium-bearing mudstone near the middle of the Brushy Basin member has been exposed by trenching. Most of the uranium is in a 34-ft thick zone of carbonaceous mudstone.

Outcrop sampling reported in the USDE report assayed up to 570 ppm U_3O_8 (0.057%). The mineralization is contained in an outcropping area covering 1000 x 800 feet. Chloritic alteration is pervasive over this outcrop. The report also indicates that drilling done in the late 1970s by a private company, then holding the area under claim, intersected higher-grade mineralization. Research is ongoing to locate these drill records.

Outcrop sampling and mapping undertaken by UPC has taken place and shows that uranium mineralization exists over a widespread area of the project. In addition, the uranium bearing units of the middle Brushy Basin formation plunge under cover to the west and north, and the mineralized trend is open in a wide arc in these directions. Chloritic alteration that appears to be associated with the uranium is readily traceable into the open ground along fracture systems that outcrop in the Cedar Mountain formation above the uranium bearing units. Results of this initial sampling program are pending.

ARIZONA

On August 22, 2005, UPC and USECC signed an agreement to add another uranium project to their Joint Venture. This project involves properties in the Arizona Strip, in northern Arizona, as part of the on-going commitment to develop uranium properties under a pre-existing Joint Venture agreement. The property, known as the Breccia Pipes Project, consisted initially of 64 lode-mining claims (STAR and JAVA claims) on BLM land in Mohave and Coconino counties, Arizona. The exploration target on these properties is breccia pipe uranium deposits.

These properties were acquired by USECC pursuant to an agreement with Nu Star Exploration, LLC. Under the terms of the agreement between UPC and USECC, UPC will earn a 50% interest in the project by contributing the first \$500,000 in acquisition and exploration expenses for the project. Additionally, UPC agrees to issue up to 500,000 common shares of UPC stock to USECC, subject to regulations of the TSX Venture Exchange, within six (6) months of the date drilling results outline an Inferred Mineral Resource on the Breccia Pipes Project as follows: 1) 250,000 common shares for the first 500,000 lbs. of contained U_3O_8 identified and 2) an additional 250,000 common shares for the second 500,000 lbs. of contained U_3O_8 identified.

The Arizona Strip was the site of a major uranium staking rush in the early 1980's. Uranium-bearing breccia pipes were first located in the Hack Canyon area of Mohave County and the mineralized material was typically of a higher grade than other uranium deposits located in surrounding areas of the Colorado Plateau. Historic mining in the Arizona Strip had produced average uranium contents of up to 0.80% U_3O_8 . The total production from individual mines in this district has ranged from about 700,000 lbs to 4,400,000 lbs U_3O_8 .

The STAR claims are contiguous with the partially mined Arizona I mine. The area is located within a short distance to the south of the Hack Canyon mining area. Mapping on the STAR claims indicates the presence of 23 potential pipes, with the potential for 4 additional targets on the JAVA claims.

A 37 hole program of shallow stratigraphic holes was completed in February 2006. Of the seven targets tested, two were confirmed to be collapse features consistent with the presence of breccia pipes. A Phase 2 follow-up drilling program is also planned to provide a deep test (maximum 2,000 feet in depth) of these two targets.

Since that time we have aggressively pursued additional land acquisitions, and have increased our land position to 215 claims (approximately 4,440 acres). Subsequently, an additional 232 mining claims (approximately 4800 acres) were acquired in Mohave County.

If any of the targets are developed to a mining stage, then the Shootaring Canyon Mill, owned by USECC, would be the likely location for ore processing.

COLORADO

The Burro Canyon project is located in San Miguel County, Colorado, in the Slick Rock Mining District, at the southern end of the highly productive Uravan Belt. As with the all the other joint venture projects with USECC, the Burro Canyon project will be a 50:50 joint venture, with Uranium Power Corp funding the first \$500,000 of acquisition and exploration expenditures.

The project consists of 141 unpatented lode-mining claims on BLM land, for a total of approximately 2900 acres.

The structural setting of the area is a syncline that strikes southeast to northwest and plunges to the southeast. Outcroppings of Morrison Formation sandstones and mudstones, Dakota Formation sandstones and Mancos Shale sediments wrap around the northwest nose of the syncline.

Immediately adjacent to the property on the northeast is the Sunday Mine complex, currently owned by Denison Mines Ltd. This area has produced about 1.5 million pounds of uranium and about 10.0 million pounds of vanadium. Information contained in published reports suggests that an additional resource of 4.0 million pounds U_3O_8 may be located at the Sunday Mine Group. Immediately adjacent, and to the southwest, the Burro mine has produced over 1.0 million pounds U_3O_8 and 8.0 million pounds V_2O_5 . The operator of these mines, Denison Mines Ltd, has announced plans to reopen them in the near future.

In detail the targets are deposits located in the fluvial sediments towards the center of the syncline occurring between the known producers. These targets are confined to the Salt Wash Member of the Morrison Formation.

Highly encouraging results were received from a recently completed drilling program on the Burro Canyon. A total of 17 holes were drilled, for a cumulative total of 20,303 feet. Of the 16 holes that reached the target Salt Wash formation, 9 encountered significant mineralization, and two can be considered to be well-mineralized. In addition, zones of anomalous radioactivity up to 65 feet in thickness were encountered.

The program was designed as a first test of the area, with widely-spaced holes (400 to 800 feet apart). The primary objective was to define the depositional environment prior to more closely-spaced drilling. The thick zones of anomalous radioactivity, located within sandstone horizons, are indicative of a sand channel with reducing capacity, a characteristic that is essential for the deposition of uranium. The substantial thicknesses encountered in the drill program, when combined with the significant mineralization in 9 of the holes, represent highly encouraging results.

The holes were drilled by Bob Beeman Drilling, of Moab UT, using standard rotary drilling techniques. All holes were geophysically logged by Century Geophysical, of Tulsa, OK. Uranium contents were calculated from the gamma ray log, producing a record of eU3O8 (equivalent U3O8), an industry standard method for evaluating uranium mineralization. To date, no coring has been carried out on the project. Coring will be necessary at a later date to determine whether or not the uranium is in equilibrium. The equilibrium state is an indication of the reliability of gamma ray logging. Typically the older the mineralization, the less likely it is that disequilibrium will affect the relationship between equivalent and the true uranium content. Significant disequilibrium is not expected for this project.

The drilling results are summarized in the following table:

Hole #	TD	Intercept	data
SR-1001	1240	830.0-832.5	2.0 ft @ 0.026% eU3O8
SR-1002	1200	854.5-857.0	2.5 ft @ 0.038% eU3O8
SR-1003	1220	no significant mineralization	
SR-1004	860	no significant mineralization	
SR-1005	1100	no significant mineralization	
SR-1006	1160	987.0-991.5	4.5 ft @ 0.046% eU3O8
SR-1007	1150	946.5-951.5	5.0 ft @ 0.091% eU3O8
SR-1008	1100	no significant mineralization	
SR-1009	1100	no significant mineralization	
SR-1010	1150	367.0-369.0	2.0 ft @ 0.015% eU3O8
SR-1011	1050	abandoned	
SR-1012	1265	1144.0-1146.0	2.0 ft @ 0.094% eU3O8
SR-1013	1280	1142.0-1145.5	3.5 ft @ 0.55% eU3O8
		and	
		1152.5-1156.0	5.5 ft @ 0.19% eU3O8
SR-1014	1360	no significant mineralization	
SR-1015	1312	no significant mineralization	
SR-1016	1356	1193.5-1195.0	1.5 ft @ 0.058% eU3O8
SR-1017	1400	1180.0-1184.0	4.0 ft @ 0.29% eU3O8

NEVADA CLAIMS, USA (is this still relevant?)

During fiscal 2004, the Company entered into an option agreement to acquire various interests in certain mineral properties located in Nevada, U.S.A. To earn the interests, the Company was to pay US\$398,540, issue 412,500 common shares and incurred US\$732,000 in exploration expenses. The Company issued 247,500 common shares at a value of \$49,500 to the vendor and 50,000 common shares at a value of \$7,500 as a finder's fee.

The Company then entered into an agreement with Staccato Gold Resources Ltd. ("Staccato") whereby Staccato can earn various interests in certain of the properties in exchange for payments totaling US\$247,500. During the 2005 fiscal year, the Company and Staccato entered into an agreement whereby Staccato can acquire the Company's remaining 50% interest in exchange for 1,000,000 shares of Staccato (received at a value of \$129,000) and \$100,000 increasing to \$125,000 if not paid by September 30, 2005. In addition to the cash and share consideration, Staccato will pay the Company 15% of any net proceeds received by Staccato from its interest in the Long Peak property. The Company and Staccato have agreed to continue to share a 50/50 interest in the Cobb Creek property. The Company received an additional 950,000 shares of Staccato at a value of \$142,500 as settlement of the cash payment owing by Staccato. The Company has written-off to operations during fiscal 2005 the remaining mineral property costs of \$122,411.

MONGOLIA

The company has now abandoned its exploration license in Mongolia and has written off its acquisition costs of \$157,859 as well as its exploration and development expenses of \$1,440,264 to operations in fiscal 2006.

SUMMARY

Management is very excited about the resurgence in the uranium exploration sector and as such has made a very aggressive entry into Utah, Wyoming, Arizona and Colorado.

Our Company's Board has evolved into a highly qualified team of professionals with essential experience in resource acquisition, exploration, and development, finance and marketing. We are committed to building a highly valued asset base and a strong, loyal shareholder following.

FINANCIAL INSTRUMENTS

The Company's financial instruments consist of cash, short-term investments, marketable securities, receivables and accounts payable and accrued liabilities. Unless otherwise noted, it is management's opinion that the Company is not exposed to significant interest or credit risks arising from these financial instruments. The fair value of these financial instruments approximates their carrying values, unless otherwise noted.

The Company is exposed to financial risk arising from fluctuations in foreign exchange rates and the degree of volatility of these rates. The Company does not use derivative instruments to reduce its exposure to foreign currency risk.

LIQUIDITY AND CAPITAL MARKETS

The Company has financed its operations to date primarily through the issuance of common shares and exercise of stock options. The Company continues to seek capital through various means including the issuance of equity and/or debt.

The financial statements have been prepared on a going concern basis which assumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. The continuing operations of the Company are dependent upon its ability to continue to raise adequate financing and to commence profitable operations in the future.

	March 31, 2007	September 30, 2006
Working Capital	\$ 4,962,550	\$ 3,657,241
Deficit	(11,178,766)	(11,008,315)

This increase of \$1,305,309 in working capital for the Six Month Period ended March 31, 2007, compared to the working capital at September 30, 2006 was primarily to proceeds from the issuance of capital stock for cash of \$2,424,722, net of cash used in operations of \$386,598 and net cash used in investing activities of \$2,089,730.

Net cash used in operating activities for the Six Month Period ended March 31, 2007 was \$386,598 compared to \$5,398 of cash used in operating activities for the same period in the prior year. The cash used in operating activities for the current period consists primarily of operating expenses, net of interest income and cost recoveries and net payments against accounts payable of \$71,567.

Net cash used by investing activities for the Six Month Period ended March 31, 2007 was \$2,089,730 compared to \$1,877,249 used during the same period in 2006. Net cash used during the current period consists primarily of expenditures of \$775,324 on mineral properties, increase in short-term investments of 1,360,946, partially offset by proceeds of \$46,540 from the sale of marketable securities.

Net cash provided by financing activities for the Six Month Period ended March 31, 2007 was \$2,424,722 compared to \$2,206,405 provided during the same period in the prior year. The cash provided by financing activities for the current period was primarily the result of the exercise of warrants.

SELECTED ANNUAL FINANCIAL INFORMATION

The following selected financial information was obtained directly from or calculated using the Company's financial statements for the years ended September 30, 2006, 2005 and 2004:

	Years ended September 30		
	2006	2005	2004
Results of Operations:			
Total Revenues	\$ 679,402	\$ 51,969	\$ 37,347
Net loss for the year	(1,515,066)	(782,636)	(363,540)
Basic and diluted loss per share	(0.02)	(0.02)	(0.01)
Financial Position:			
Working Capital	\$ 3,657,241	\$ 3,801,392	\$ 1,105,500
Mineral Properties	6,980,711	3,908,649	1,635,606
Total assets	10,859,922	7,779,342	2,753,541
Total long-term debt	-	50,000	-

RESULTS OF OPERATIONS

For the Six Month Period ended March 31, 2007, the Company recorded a net loss of \$170,451 compared to a net income of \$166,479 during the same period in the previous year. The increase in loss for the current period is primarily the result of a general increase in general and administrative costs of \$100,984 over the prior year. As well, the prior year contained a gain on disposal of marketable securities of \$350,576, compared to \$34,540 in the current period.

SUMMARY OF QUARTERLY RESULTS

	Dec 30/06	Dec 30/06	Sept 30/06	June 30/06	March 31/06	Dec. 30/05	Sept 30/05	June 30/05
(a) Net sales or total revenues	\$ 32,120	\$ 132,020	\$ 33,215	\$ 264,830	\$ 308,750	\$ 72,607	\$ 32,821	\$ 3,145
(b) Income (loss) before extraordinary items								
- total	(185,691)	15,240	(1,762,936)	81,390	180,939	(14,459)	(280,077)	(178,655)
- per share undiluted	0.00	0.00	(0.02)	0.00	0.00	(0.00)	(0.01)	(0.01)
- per share diluted	0.00	0.00	(0.02)	0.00	0.00	(0.00)	(0.01)	(0.01)
(c) Net income (loss)								
- total	(185,691)	15,240	(1,762,936)	81,390	180,939	(14,459)	(280,077)	(178,655)
- per share undiluted	0.00	0.00	(0.02)	0.00	0.00	(0.00)	(0.01)	(0.01)
- per share diluted	0.00	0.00	(0.02)	0.00	0.00	(0.00)	(0.00)	(0.01)

For the quarter ended March 31, 2007, the Company recorded a net loss of \$185,691 compared to a net income of \$180,939 during the same period in the previous year. The increase in loss for the current period is primarily the result of a general increase in general and administrative costs of \$58,005 over the prior year. As well, the prior year contained a gain on disposal of marketable securities of \$300,535 compared to \$nil in the current period.

Significant changes in key financial data from 2006 to 2007 can be attributed to a general increase in the operational activities of the company, resulting in higher general and administrative costs. Revenues increased particularly in recent quarters when the Company held large cash balances from funds raised through private placements and the exercising of warrants.

The Company earns interest revenue from cash held in banks and securities held as short-term investments.

RELATED PARTY TRANSACTIONS

The Company entered into the following transactions with related parties in the six-month period ended March 31, 2007:

- a) Paid or accrued consulting fees of \$16,938 (2006 - \$ nil) to two directors.
- b) Paid or accrued management fees of \$72,500 (2006 - \$60,000) to a company controlled by a director.
- c) Paid or accrued administration fees of \$20,400 (2006 – nil) to a director.
- d) Paid or accrued \$3,906 (2006 - \$nil) of geological consulting fees to a director. These amounts have been charged to mineral properties.
- e) Paid or accrued \$2,912 (2006 - \$nil) of geological consulting fees to a company controlled by a director. These amounts have been charged to mineral properties.
- f) Paid or accrued \$6,250 (2006 \$nil) of management fees to a company controlled by a director.

These transactions were in the normal course of operations and were measured at the exchange amount which was the amount established and agreed to by the related parties.

OUTSTANDING SHARE DATA

The following details the common shares, stock options, and warrants outstanding as of the date of this MD&A

Common Shares

	Number of Shares
Authorized Unlimited common shares, without par value	
Issued Balance at May 25, 2007	96,690,160

Stock options

Number of Shares	Exercise Price	Expiry Date
200,000	0.50	May 5, 2007 (exercised April 18, 2007)

Warrants

Number of Shares	Exercise Price	Expiry Date
1,925,000	0.50	March 20, 2008

RISKS AND UNCERTAINTIES

Limited Operating History

The Company is in the early stages of exploring its mineral properties for uranium ore. The Company does not hold any known mineral reserves of any kind and therefore does not generate any revenues from production. Its success will depend largely upon its ability to locate commercially productive mineral reserves. As a result of these factors, it is difficult to evaluate the Company's prospects, and its future success is more uncertain than if it had a longer or more proven history of operations.

History of Losses

The Company has incurred net losses every year since inception and as of March 31, 2007, had an accumulated deficit of \$11,178,766. The Company anticipates significant expenditures for its mineral exploration programs. Since most exploration projects do not result in the discovery of commercially productive mineral reserves and are ultimately expensed in full, the Company expects to report substantial net losses for at least the foreseeable future.

No History of Dividends

Since incorporation, the Company has not paid any cash or other dividends on its common stock and does not expect to pay such dividends in the foreseeable future, as all available funds will be invested primarily to finance its mineral exploration programs. The Company will need to achieve profitability prior to any dividends being declared.

Dilution

The Company does not generate any revenues from production and does not have sufficient financial resources to undertake by itself all of its planned exploration programs. The Company has limited financial resources and has financed its operations primarily through the sale of securities such as common shares. The Company will need to continue its reliance on the sale of such securities for future financing, resulting in dilution to the Company's existing shareholders. The amount of additional funds required will depend largely on the success of the Company's exploration programs.

Further exploration programs will depend on the Company's ability to obtain additional financing which may not be available under favourable terms, if at all. If adequate financing is not available, the Company may not be able to commence or continue with its exploration programs or to meet minimum expenditure requirements to prevent the full or partial loss of its mineral properties. Also, failure to meet the Company's share of costs incurred under joint venture arrangements to which it is a party may result in a reduction of its interests in mineral properties. Furthermore, if other parties to such agreements do not meet their share of such costs, the Company may be unable to finance the cost required to complete the recommended programs.

Capital and Liquidity Risk

The amount of financial resources available to invest for the enhancement of shareholder value is dependant upon the size of the treasury, profitable operations, and a willingness to utilize debt and issue equity. Due to the size of the Company, financial resources are limited and if the Company exceeds growth expectations or finds investment opportunities it may require debt or equity financing. There is no assurance that the Company will be able to obtain additional financial resources that may be required to successfully finance transactions or compete in its markets on favourable commercial terms.

RISKS AND UNCERTAINTIES (cont'd....)

No Known Mineral Reserves

With the exception of the Sheep Mountain property, all of the Company's mineral properties are in the exploration stage and are without known mineral reserves of any kind. Although the Company may discover mineral reserves through its exploration programs, commercial production may not be warranted due to insufficient quantities. Development of any of the Company's properties will only follow upon obtaining satisfactory exploration results. However, few mineral properties that are explored are ultimately developed into producing mines.

In the event a commercially productive mineral reserve is discovered, substantial expenditures are required to establish mineral reserves through drilling, to develop metallurgical processes for extraction and to develop the mining and processing facilities and infrastructure at the production site. The marketability of any minerals discovered may be affected by numerous factors which are beyond the Company's control and which cannot be predicted, such as market fluctuations, the proximity and capacity of milling facilities, mineral markets and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals, and environmental protection. Depending on the price of minerals produced, the Company may determine that it is impractical to commence or continue commercial production.

Title to Mineral Properties

The Company believes it has diligently investigated title to all of its mineral properties and, to the best of its knowledge, title to all properties are in good standing. However, the properties may be subject to prior unregistered agreements or transfers, which may affect the validity of the Company's ownership of such properties.

Although the Company has exercised the usual due diligence with respect to title to properties in which it has a material interest, title to such properties may be challenged or impugned in the future. The boundaries of the Company's mineral properties have not been surveyed and, therefore, the precise location and area of these mining properties may be in doubt. The Company makes a search of mining records in accordance with mining industry practices to confirm that it has acquired satisfactory title to its properties, but does not obtain title insurance with respect to such properties. The possibility exists that title to one or more of its properties, particularly title to undeveloped properties, might be defective because of errors or omissions in the chain of title, including defects in conveyances and effects in locating or maintaining such claims. Should any defect in title be discovered by or disclosed to the Company, all reasonable steps would be taken to perfect title to the particular claims in question. The Company is not aware of any material defect in the title to its mineral properties.

A claim on any of the Company's mineral properties, especially where commercially productive mineral reserves have been located, could adversely affect the Company's long-term profitability as it may preclude entirely the economic development of a mineral property. Also, such a claim would affect the Company's current operations due to the high costs of defending against such claims and its impact on senior management's time.

Competition

The resource industry is intensively competitive in all of its phases, and the Company competes with many companies possessing much greater financial and technical research resources. Competition is particularly intense with respect to the acquisition of desirable undeveloped precious-metal properties. The principal competitive factors in the acquisition of such undeveloped properties include the staff and data necessary to identify, investigate and purchase such properties, and the financial resources necessary to acquire and develop such properties. Competition could adversely affect the Company's ability to acquire suitable prospects for exploration in the future.

Acquisition and Expansion Risk

The Company intends to expand its operations through organic growth and depending on certain conditions, by acquiring additional resource properties or resource-based businesses. There can be no assurance that the Company will be able to identify, acquire or profitably manage additional properties or businesses.

RISKS AND UNCERTAINTIES (cont'd...)

Industry Operating Hazards and Risks

Mineral exploration involves many risks, including the inability of the Company to locate commercially productive mineral reserves, which even a combination of experience, knowledge and careful evaluation may not be able to overcome. The operations in which the Company has a direct or indirect interest will be subject to all of the hazards and risks normally incidental to resource companies, any of which could result in work stoppages and damage to persons or property or the environment and possible legal liability for any and all damage. Fires, power outages, labour disruptions, flooding, explosions, cave-ins, land slides and the inability to obtain suitable or adequate machinery, equipment or labour are some of the industry operating risks involved in the operation of mines and the conduct of exploration programs. Other risks include injury or loss of life, severe damage to or destruction of property, clean-up responsibilities, regulatory investigation and penalties and suspension of operations. The occurrence of any of these operating risks and hazards may have an adverse effect of the Company's financial condition and operations.

Although the Company will, when appropriate, secure liability insurance in an amount which it considers adequate, the nature of these risks is such that liabilities might exceed policy limits, the liability and hazards might not be insurable, or the Company might elect not to insure itself against such liabilities due to high premium costs or other reasons, in which event the Company could incur significant costs that may have a material adverse effect upon its financial condition and operations.

Fluctuations in Metal Prices

Although the Company does not hold any known mineral reserves of any kind, its future revenues, if any, are expected to be in large part derived from the future mining and sale of uranium and other metals or interests related thereto. The prices of these commodities have fluctuated widely, particularly in recent years, and are affected by numerous factors beyond the Company's control including international economic and political conditions, expectations of inflation, international currency exchange rates, interest rates, global or regional consumptive patterns, speculative activities, levels of supply and demand, increased production due to new mine developments and improved mining and production methods, availability and costs of metal substitutes, metal stock levels maintained by producers and others and inventory carrying costs. The effect of these factors on the price of uranium, and therefore the economic viability of the Company's operations, cannot be accurately predicted.

Depending on the price obtained for any minerals produced, the Company may determine that it is impractical to commence or continue commercial production.

Foreign Currency Risk

The Company typically purchases materials, equipment and services in US currency. The Company does not utilize hedging programs to mitigate the impacts of shifting relative currency values and, therefore, currency risk exists and could impact the financial results of future operations.

Dependence on Key Personnel

Loss of certain members of the executive team or key operational leaders of the company could have a disruptive effect on the implementation of the Company's business strategy and the efficient running of day-to-day operations until their replacement is found. Recruiting personnel is time consuming and expensive and the competition for professionals is intense. The Company may be unable to retain its key employees or attract, assimilate, retain or train other necessary qualified employees, which may restrict its growth potential.

MD&A PREPARATION

This MD&A was prepared as of May 25, 2007. This MD&A should be read in conjunction with our unaudited interim financial statements for the six month period ended March 31, 2007. This MD&A is intended to assist the reader's understanding of Uranium Power Corporation and its' operations, business, strategies, performance and future outlook from the perspective of management. The documents mentioned above, as well as news releases and other important information may be viewed through the SEDAR website at www.sedar.com

The reader should also refer to the audited financial statements for the period ended September 30, 2006 and the Management Discussion and Analysis for that period.

This MD&A may contain management estimates of anticipated future trends, activities, or results; these are not a guarantee of future performance, since actual results may vary based on factors and variables outside of management's control. Management is responsible for the preparation and integrity of the financial statements, including the maintenance of appropriate information systems, procedures and internal controls. Management is also responsible to ensure that information disclosed externally, including the financial statements and MD&A, is complete and reliable. Management has evaluated the effectiveness of the Company's disclosure controls and procedures and has concluded that they are operating effectively.

Uranium Power's Board of Directors follows recommended corporate governance guidelines for public companies to ensure transparency and accountability to shareholders. The Board's Audit Committee meets with management quarterly to review the financial statement results, including the MD&A, and to discuss other financial, operating and internal control matters. The Audit Committee receives a report from the independent auditors annually, and is free to meet with them throughout the year.

SUBSEQUENT EVENTS

On May 3, 2007, the company closed a private placement of 12,500,000 units at \$1.00 per unit providing UPC with gross proceeds of \$12,500,000. Each unit consists of 1 share and ½ share purchase warrant, exercisable for two years @ \$1.25. Costs of the offering included a 7% commission, paid as 367,380 units and cash of \$507,620. As well, the agents received 1,250,000 warrants for two years @ \$1.25, and a corporate finance fee of 75,000 units. Legal and other incidental costs of the offering are estimated at \$70,000, giving UPC net proceeds of \$11,922,380.

On May 14, 2007, the Company signed an option agreement whereby UPC can earn up to a 65% interest in the South Fork project, located to the east of the Cypress Hills in southwestern Saskatchewan. The terms of the agreement call for UPC to reimburse the vendor for prior expenditures, not to exceed \$100,000 and to carry out \$1,500,000 of exploration by January 25, 2009. This will earn UPC a 50% interest. UPC can then increase its interest to 65% by spending an additional \$1 million on exploration activities by January 25, 2011. UPC will be the operator.

Subsequent to the period end, 50,000 warrants were exercised for proceeds of \$25,000.

Subsequent to the period end, 200,000 options were exercised for proceeds of \$100,000.
